SOLTIS® 86

■ Unique shade fabrics with stability and a view

Soltis® textiles offer the best of both worlds under the sun. Keeping your view of the outside world as well as reducing your interior cooling costs. With the increase of energy prices, people across the world are protecting their internal environment with the use of Soltis® products.

Manufactured according to the exclusive Précontraint® Ferrari® patented technology, Soltis® textiles are maintained under tension during the whole production process. The result is a very important dimensional stability of Soltis® textiles which do not sag during installation procedure or intensive uses.

SOLTIS® 92

SOLTIS® 86

Micro-ventilated textiles for solar protection

Main applications: Façade blinds

Conservatory and glassroof blinds - Shadesails

■ A real heat shield

Soltis® 86 & 92 textiles have a micro-ventilation system that regulates the sun's heating effects. When they are placed on the outside of windows they absorb and reflect back up to 97% of the heat contained in the sun's rays, thereby eliminating the greenhouse effect.

Such unrivalled thermal performances enable reduced use of air-conditioning in the building.

Soltis® 86 & 92 makes a strong contribution to reduced energy expenditure, allowing better cost control of the building.

Example of values given for color shade 86-2047 and 92-2040 (according to ASHRAE 74-1988 with clear plate, thickness 6.4 mm)

■ Doubly efficient: anti-glare and transparent

Spa center in Belzig - Germany

Offices in Landshut - Germany

Soltis® 86 & 92 textiles preserve privacy and comfort inside while providing visibility to the outside.

They offer natural lighting that promotes well-being for people, while eliminating glare. Soltis® 86 & 92 comes in a broad range of colors, each equally capable of controlling luminosity transmission, significantly improving the overall comfort of the building.

■ Metallic and interferential finishes

The metallic and interferential appearance of Soltis® 86 & 92 opens up new possibilities. Solar protection textiles thus become an architectural extension of the building's facade.

Soltis® 92 interferential is the only textile that changes color depending on the viewing angle. Changes may go from red to green, or from grey to blue — Soltis® 92 drapes and breathes life into facades.

Reuter's Agency, Geneva - Switzerland

■ The exclusive **Précontraint®**

Ferrari® technology

Made using the exclusive and patented Ferrari® Précontraint® technology; Soltis® textiles are manufactured under equal tension throughout the manufacturing cycle.

This value added benefit allows the textile to keep its shape and form when in constant daily use. Providing users with a product that combines strength with a lightweight product.

■ Technical features

Sustainable development

Ferrari® development is based on strict adherence to good safety and environmental practices, that include an understanding of Life Cycle Analysis (LCA), selection of the best materials, and eco-design.

The Company obtained its first ISO 14001 certification in 2003.

100% recyclable

Ferrari® developed the Taxyloop® technology specifically for the recycling of composite PVC membranes and textiles. Through the management of its end-of-life products Ferrari® is committed to sustainable development.
